

# Inventory Summary

PWS Name: City of Bellville

PWSID: TX0080001

**Purpose of this worksheet:** For water systems to provide a summary of the service line inventory, including information on ownership, inventory format, and the number of service lines for each of the four required materials classifications.

**Note:** Cells that have a superscript <sup>x</sup> are required fields.

## Part 1. General Information

1. Is this the <b>Initial Inventory</b> or an <b>Inventory Update</b> ? <sup>x</sup>	Initial Inventory
2a. Who <b>owns the service lines</b> in your system? <i>If other, please explain below.</i> <sup>x</sup>	Ownership is split
2b. Is there documentation that defines service line ownership in your system, such as a local ordinance? <i>If yes, please describe below and explain where ownership is split (e.g., property line, curb stop).</i>	No
3a. Describe when lead service lines were generally installed in your system below. Lead service lines are most likely in homes built before 1989, so it is assumed that all homes built prior to 1989 have lead service lines (both system-owned and customer-owned portions).	
3b. When were lead service lines banned for the system? Reference the state or local ordinance that banned the use of lead in your system. The Texas lead ban went into effect on July 1, 1988. The 1994 Bellville Code of Ordinances banned the use of lead lines in the City's water system. This inventory assumes that all buildings that were constructed after 1989 have non-lead service lines (both system-owned and customer-owned portions).	
4. Are there lead goosenecks, pigtails or connectors in the system?	No

## Part 2. Inventory Summary Table <sup>1</sup>

When using the **Detailed Inventory** worksheet, the classifications in the Column "Entire Service Line Material Classification" (Column Q) will be used to calculate the total number of service lines for each of the four material classifications below. **Remember this is the classification for the entire service line.**

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR) <sup>x</sup>
<b>Lead</b>	Any portion of the service line is known to be made of lead. <sup>2</sup>	0
<b>Galvanized Requiring Replacement (GRR)</b>	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	0
<b>Non-Lead</b>	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	755
<b>Lead Status Unknown</b>	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	1,503
<b>TOTAL</b>		<b>2,369</b>

### Notes

<sup>1</sup> This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. See the **Classifying SLs** worksheet for additional guidance on assigning a materials classification to the entire service line when ownership is split. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

<sup>2</sup> A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do not, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines.
